## SMART AND INNOVATIVE VIDEO SURVEILLANCE AND MONITORING SOLUTION

Our solution is based on the unique experience our company has acquired with ground-breaking projects in the security market and on the extensive expertise we have developed in big data, analytics and cloud computing.
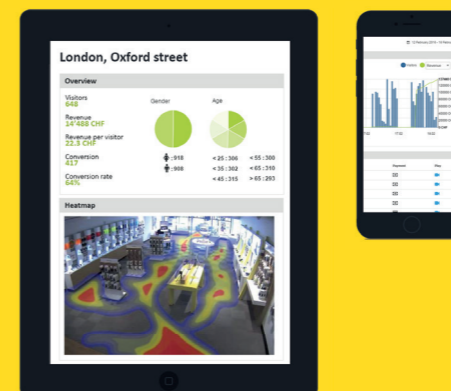

SECURITY AS A SERVICE

By covering the whole process of video surveillance, we are able to provide a high-performing end-user solution. From capture with IP cameras to recordings in the cloud and from smart analysis to automatic alerts or tailored business intelligence tools, our platform can make video surveillance and monitoring relevant and easy.

① CAPTURE

INTERNET OF THINGS (IoT)

Cameras, speakers and other devices such as remote controls are now connected to the Internet. Our expertise allows us to securely manage them, to collect data from multiple sources, and most importantly to skilfully combine these data in order to bring our customers the specific information they need.

② ANALYSE & RECORD

INTRUSION DETECTION

③ ALERT

③ DISPLAY

BUSINESS INTELLIGENT DASHBOARD

BIG DATA

Our technology is specifically designed to manage the vast amounts of information coming from our customers' recorded video data. We provide a new forward-thinking solution by adding performance and being scalable, which makes video proactive and actionable.

POWERFUL ANALYTICS

Our unique technology of meta data management allows the combination of multiple analyses in order to offer smart, predictive and adaptive detection and investigation.
Our Active Learning technology constantly improves the analytics thanks to the information gathered from the video feeds and the users' feedbacks.

SAFE & SECURE CLOUD

The cloud is a real opportunity to store data safely and securely. By recording our customers' video in the cloud, video evidence can't be damaged or stolen and it makes our solution even more efficient and reliable. We work with enterprise-level data centers and can ensure a high level of data privacy.

OUR EXPERTISE

Our video surveillance and monitoring platform is chosen by key actors in

Alarm & Monitoring Centers, Retail, Banking, Transportation, Smart Cities, Government

and significantly helps them at 3 levels in their company:

SECURITY
SMART AND PROACTIVE SURVEILLANCE

We bring our customers a smart solution that overcomes all the issues that can arise with a standard surveillance system. Our product is self-learning, detects activity automatically, resolves problems like false alarms, provides instant pre-event video images without the help of human intervention. This allows the customers to concentrate on their own work. By taking an active role in the process, our solution is able to make security management meaningful and efficient.

MANAGEMENT & OPERATIONS
VIDEOSURVEILLANCE AS A SERVICE

By providing security as a service, our solution frees IT resources for the customers' core business. It overcomes the expensive costs of local storage and maintenance of a recorder and makes video management easy and available remotely anytime, anywhere. We can ensure full protection of our customers' environment by integrating to any alarm receiving center 24/7 or out of hours. We work with enterprise level safe and secure data centers to make sure privacy and security are of the highest standard.

MARKETING AND TRENDS
IMPROVE THE CUSTOMER EXPERIENCE

We provide key metrics in order to help our customers achieve their objectives of maximising sales revenue and delivering a cutting-edge customer experience. Features like improved people counting, queue management and heat map can strongly improve efficiency and optimise staff management.
We combine these analytics from video with key data to bring relevant and actionable information to our customers' fingertips, and improve the overall performance of their business.

WHY MORPHEAN

- European leader relying on Swiss quality
- Unique solution that improves security, optimises operations and gives access to business intelligence
- Security as a Service for a flexible and affordable solution
- Easy access to cutting edge analysis technology

EUROPEAN LEADER

Based in Switzerland, our engineers are committed to providing the highest quality and security standards. We ensure proximity and quality of services through our multiple sites within Europe.

INNOVATIVE SOLUTIONS

Morphean brings the most innovative video surveillance solution to the market. Capitalising on the latest video analysis and data management technology, Morphean makes video easy-to-use, efficient and actionable for each and every user.

15 YEARS OF EXPERIENCE

Morphean has been pioneering in digital video protection systems for over fifteen years. Since then, we have completed ground-breaking projects and offer our technology to the major actors of the security market.

VALUABLE PARTNERSHIPS

Our solution is chosen by the leaders of the whole Europe to provide their customers with hosted video management. We work closely with with Axis Communications, world leader in network and security cameras to ensure the best quality in video images.
